

Diego Flores Aguirres - Professional CV

Professional Profile

Full Stack Developer with experience building web applications, desktop applications and business management systems. Specialized in C#, JavaScript, React and Node.js, with solid knowledge of RESTful API design, data modeling and relational databases (SQL Server and MySQL). Experienced in custom software solutions for business processes across different industries, including process management and automation with tools such as n8n. Adaptable, problem-solving and results-oriented profile, with fast learning skills and strong teamwork capabilities.

Languages and Technologies

Programming languages: C#, JavaScript, Python, SQL

Frameworks: React.js, Node.js, Express, .NET

Databases: SQL Server, MySQL

Frontend: HTML5, CSS3, Bootstrap

Automation: n8n

Tools: Git, REST APIs, OpenCV, Office, Google Ads

Methodologies: Scrum

Professional Experience

Full Stack Developer Freelance

2022 - Present | Tucuman

- Built custom software solutions for different industries, including management systems, automation workflows and data analysis tools.

Full Stack Developer

Commercial management system - LA MONY

2023 - Present | Tucuman

- Designed, developed and implemented a web management system from scratch using JavaScript (React and Node.js) and MySQL.
- Automated key business processes: sales, inventory control, staff management and daily income/expense administration.
- Designed a multi-branch solution with role-based access control and centralized operations.
- Implemented user access logic with automatic branch assignment, allowing operation across multiple locations.
- Developed cash register control modules and monthly financial analysis features, improving organization and traceability.
- Deployed the system to production on a Linux (Ubuntu) VPS, configured the domain and enabled remote access for multiple branches.
- Implemented the system in 3 branches, currently in production and used daily.
- Owned an end-to-end role covering functional analysis, development, deployment, maintenance and system evolution.

Backend Developer

Electoral management system - Albornoz Programacion

2022 - 2023 | Tucuman - Santiago del Estero

- Developed a .NET desktop application (C# - WinForms) integrated with cloud-hosted SQL Server (Azure / Google Cloud).
- Implemented a system for electoral campaign management and analysis, enabling behavior evaluation by area and resource allocation optimization.
- Developed modules for voter registration, hierarchical party structures and mobilizer management.
- Implemented role- and level-based access control to segment functionality according to user profiles.
- Integrated electoral registry validation to verify identity and prevent duplicated DNI records.
- Processed large volumes of data and generated real-time information during the electoral process.
- Built reports and metrics for pre-election, election-day and post-election analysis, supporting strategic decision-making.
- Worked in a 4-developer team, focused on functional logic, backend and system flow design.

Full Stack Developer

Management system for distributor - Lomo Plateado SRL

2023 - 2024 | Tucuman

- Developed a web management system for a beverage distributor, optimizing inventory control and operational processes previously handled in Excel.
- Implemented a microservices-based architecture using Node.js, Python and MySQL to decouple key features.
- Designed and developed REST APIs for communication between microservices.
- Developed modules for customer management, suppliers, current accounts, orders and merchandise control.
- Implemented inventory control with dynamic indicators (optimal, low, high) to improve decision-making.
- Developed a solution for product batch creation and management.
- Automated contract generation and email delivery through independent services.
- Implemented daily reports and dashboards for data analysis and operational metrics.
- Significantly improved business management and control times.
- Worked in a 4-person team, participating in functional analysis, architecture and development.

AI Developer / Computer Vision

Computer vision system for classroom automation - UTN FRT

2023 | Tucuman

- Developed a computer vision system using Python and OpenCV for real-time person detection inside classrooms.
- Implemented logic for student counting and occupancy analysis, focused on automating resources such as lighting and climate control.
- Processed real-time frames using computer vision techniques, achieving accuracy levels above 75%.
- Designed an API-based integration with other systems responsible for classroom hardware control.
- Designed the solution with future extension to facial recognition for student attendance automation.
- Participated in an interdisciplinary project with electronics, systems and other areas, focused on energy optimization and technological modernization.
- Built the project from scratch in a 4-person team as a final degree project.
- Applied artificial intelligence and image processing techniques to solve real operational efficiency problems.

Education

University Technician in Programming

Universidad Tecnologica Nacional (UTN) - Facultad Regional Tucuman

2022 - 2024 | Tucuman

Information Systems Engineering (incomplete)

Universidad Tecnologica Nacional (UTN) - Facultad Regional Tucuman

2013 - 2019 | Tucuman
